SIDDHI MEHENDALE

Bengaluru, India 560066 • +91 7725977636 • siddhimehendale@gmail.com

PROFESSIONAL SUMMARY

Software Engineer and Solutions Builder with 4+ years of enterprise experience at JPMorgan Chase & Co., combined with advanced credentials including an M.Tech in CS from BITS Pilani. Proven track record designing, deploying, and operationalizing systems and onboardings across 20+ lines of business (LOBs). Hands-on expertise building scalable pipelines with Python, PyTorch, and Model Context Protocol (MCP), delivering responsible AI governance and high-impact automated decisioning.

CORE COMPETENCIES & TECHNICAL SKILLS

Generative & Agentic AI:	Agentic AI, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Claude Code, MS Copilot Studio, OpenAI, Hugging Face Transformers, Prompt Engineering
ML Frameworks & Data:	Python, PyTorch, TensorFlow / Keras, Pandas, NumPy, Vector Databases, Embeddings, LLM Evaluation, Bias Detection & Responsible AI
Full-Stack & Platforms:	React, Streamlit, FastAPI, Uvicorn, REST APIs, Microservices, MLflow, AWS, Kubernetes, Docker, Splunk, CI/CD Pipelines
Enterprise Architecture:	SLA Risk Mitigation, Case Lifecycle Management, Tableau, Pega PRPC (Certified Architect)

PROFESSIONAL EXPERIENCE

Software Engineer II | JPMorgan Chase & Co. Jan 2024-Present | Bengaluru, India

- **AI Use Case Pipeline & Cross-Functional Enablement:** Partnered with business stakeholders across 20+ lines of business (LOBs) to evaluate operational friction, develop features and size automation opportunities.
- **Agentic Orchestration:** Prototyped an enterprise Confluence knowledge retrieval engine using Model Context Protocol (MCP), and LLM APIs, enforcing data quality validation gates and cutting inquiry latency.
- **Pega Tool-Use:** Partnered in Engineering custom MCP server integration layers connecting Pega case management with intelligent agentic tools, equipping operational teams with contextual data retrieval and automated exception summaries.
- **Prototyping & Delivery Acceleration:** Utilized Claude Code and Microsoft Copilot to prototype agent workflows, author automated test harnesses, and establish prompt engineering and responsible governance runbooks.

Software Engineer | JPMorgan Chase & Co. Aug 2021 Jan 2024 | Bengaluru, India

- **Pega Tool-Use:** Architected and operationalized automated decisioning workflows in Pega PRPC, converting complex multi-party transaction policies into straight-through processing rules; minimized manual exception handoffs and accelerated cycle times across critical operational pipelines.
- **SLA Monitoring & Exception Visibility:** Designed and deployed enterprise Tableau monitoring dashboards tracking end-to-end operational lifecycles, enabling cross-functional leaders to identify SLA breach risks early, track cycle times, and optimize transaction throughput.
- **High-Volume Partner & Business Onboarding:** Partnered directly with operations, product owners, and external interfaces to onboard high-volume business units onto screening pipelines, ensuring zero SLA degradation and business continuity during peak transaction spikes.
- **Operational Resilience & Infrastructure Stability:** Supported application migration to Kubernetes, eliminating processing bottlenecks and ensuring continuous operational uptime across mission-critical settlement streams.

Software Engineer Intern | JPMorgan Chase & Co. Mar 2021 Jul 2021 | Bengaluru, India

- **Process Modeling & Lifecycle Optimization:** Modeled end-to-end case lifecycles and business routing logic in Pega PRPC to standardize intake, triage, and handoffs across wholesale operational workflows.
- **Partner/Interface Integration & Verification:** Defined interface specifications and built automated test suites to validate seamless message exchange and data handoffs across inter-banking partner protocols, ensuring 100% verification coverage.

EDUCATION & ACADEMIC RESEARCH

M.Tech in Computer Science — **BITS Pilani** Jan 2024 – Jan 2026

> **M.Tech Dissertation: AI/ML-based Framework for Hiring Process**
> Designed and built an end-to-end hybrid-AI hiring system combining multimodal resume parsing (Google Gemini API, PyMuPDF), custom-trained Seq2Seq Question Generation with Attention (Keras/TensorFlow), an interactive candidate dashboard in **React**, an administrative evaluation cockpit in **Streamlit**, and an asynchronous real-time answer evaluation service (FastAPI, Uvicorn, JSON-mode structured feedback).

PG Certification in Generative & Agentic AI — **BITS Pilani** Jul 2026 – Present

B.Tech in Computer Science & Engineering — **Mody University (SET)** Jul 2017 – Jul 2021

CERTIFICATIONS

Certified Pega System Architect • **AWS Certified AI Practitioner** • **AWS Certified Cloud Practitioner**
